

INFORMATION ABOUT TREES TO PLANT NEAR POWER LINES

PLANT THE RIGHT TREE IN THE RIGHT PLACE.
LET'S WORK TOGETHER FOR A SAFE AND BEAUTIFUL COMMUNITY!

HOW TO MEASURE THE SAFE PLANTING DISTANCE

- 1 Lay a rope on the ground along the imaginary line connecting the two poles that support the medium-voltage wire.
- 2 Lay a second rope on the ground so that it forms a right angle with the first rope. Along the second rope, measure the recommended distance for the desired tree (see the list of options below).
- 3 Move the first rope to the marked point on the ground from the previous step, making sure it remains perpendicular to the second rope. You can then plant your tree safely at this distance from the power line.

DISTANCE 3.5 METRES (11.5 FEET)
